PROJECTS

Express Authorization | BCIT Project April 2021

- Created express servers in TypeScript and created intricate class-based OOP layout for a messaging app to allow local login and signup.
- Created front end mobile application login, sign up, post and comment pages using HTML, CSS, jQuery, NodeJS, and TypeScript.

Crypto-OAuth Login | Side Project February 2021

- Implemented Google Authentication in a login modal for a crypto trading app. Provided analysis and recommendations to project lead.

Business-proposal | BCIT Project February 2021

- Worked with a R&D team to write a business proposal for a site redesign. Used Trello to organize team workflow.
- Composed a business report of over 20 pages and 6000 words. Placed images, created graphs, and ensured the document was attractive.
